CONDITIONS FOR AUCTIONS UNDER THE AUSPICES OF THE NGUNI CATTLE BREEDERS' SOCIETY

Nguni stud breeding is subject to the stipulation of the Animal Improvement Act and conforms to the standards of the Nguni Cattle Breeders' Society. The Nguni Cattle Breeders' Society therefore has the right to implement certain controls to ensure the accuracy of information regarding parentage, performance and estimated breeding values.

Information regarding parentage, performance and estimated breeding values of animals, as supplied by the breeder, have been verified and compared to the official database held on the database of the Society's registering authority, SA Stud Book. The Nguni Cattle Breeders' Society therefore, confirms the accuracy of such information.

To the knowledge of the Nguni Cattle Breeders' Society these controls have been carried out accurately. However, the Nguni Cattle Breeders' Society does not take any responsibility for incorrect information through printing errors.

Animals on such auctions have been visually screened by inspectors of the Nguni Cattle Breeders' Society and comply with the Nguni minimum breed standards as stipulated by the Nguni Cattle Breeders' Society.

In terms of the requirements for the sale of animals under the auspices of the Nguni Cattle Breeders' Society, bulls that are presented must within the preceding three-month period have been tested by a veterinarian in respect of breeding soundness (external genitals, internal genitals, rectal examination, macro and microscopic evaluation of semen sample) and must have tested negative in respect of Trichomoniasis, Vibriosis, CA and TB. Breeders are advised to run tested bulls separate from females until the date of the auction (Point 2.5 of Schedule G2). All other animals must have tested negative in respect of TB and CA as close as possible to but not more than three months prior to the auction date. (Point 2.6 of Schedule G2).

The Nguni Cattle Breeders' Society DOES NOT however, have any control over:

- Immunization and the general health status of animals
- Suitability of a bull for breeding
- Fertility status of animals
- Unregistered animals

Teelwaardes en Seleksie waardes

Die Teelwaardes en Seleksie Waardes in hierdie verslag dui die genetiese meriete van diere aan – alle omgewingseffekte is uit die waardes verwyder. Die inligting is gebaseer op diere wat wetenskaplik korrek en presies gemeet is volgens internasionaal aanvaarbare metodes. Teelwaardes word beraam uit verskillende bronne van inligting: voorouers, eie prestasie en nageslag. Seleksie waardes is 'n kombinasie van relevante teelwaardes.

Seleksie W. TW Ind TW	KALF GEMAK		MELK	KALFGROEI	ONDERHOUD		GROEI TOETS					VRUGBAARHEID			KOEI WAARDE	GROEI WAARDE	PRODUKSIE WAARDE

	Opmerkings:														Spoelings/Embrios/Kalwers:			0/0/0		
	-														Toetse: -					
															Inent. -					

Seleksie waardes:

Seleksie Waarde (Selekt.W)	Wat beteken 'n waarde bo rasgemiddeld (100)?
KALFGEMAK	Kleiner kalf by geboorte – makliker kalwing
MELK	Koeie met meer melk en beter moeder eienskappe
KALFGROEI	Swaarder kalf by speen as gevolg van groeikragtigheid van die kalf self
ONDERHOUD	Diere met laer behoeftes vir onderhoud.
VRUGBAARHEID	Koeie / dogters wat vroeër en/of meer gereeld kalf.

Maklike interpretasie van Seleksie Waardes en Teelwaarde Indekse:

- Die gemiddeld van lewendige diere in die hele ras is gelyk aan 100
- Bokant 100: meer gewenste rigting,
- Onder 100: minder gewenste rigting
- Meeste diere is gemiddeld (tussen 90 en 110)

Nguni Cow Value and Nguni Growth Value

The Cow and Growth Values combine different weighted breeding values into a single value, making it easier to identify the “best” animal when many traits and consequently many breeding values are involved. Breeding values are weighted scientifically according to economic importance and heritability.

The **Nguni Cow Value** focuses more on fertility and less on growth, while the **Nguni Growth Value** emphasizes growth components without impairment of selection for other important features such as milk and fertility.

Interpretation of Selection Values

Sub Value	<80 (Worse)	80-120 (Safe)	>120 (Better)
Calving ease	Heavier birth wt	Average birth wt	Lower Birth wt
Calf Growth	Low weaning wt	Average weaning wt	Heavy weaning wt
Milk	Low milk	Average milk	High milk
Maintenance	High mature wt / milk	Avg mature wt/milk	Low mature wt/milk
Fertility	Low fertility	Average fertility	High fertility

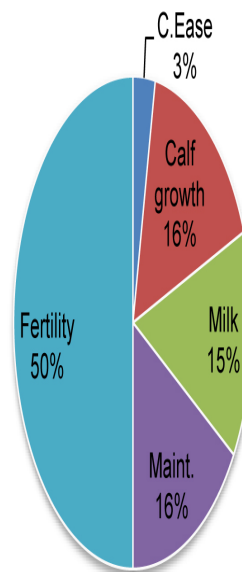

The ‘ideal’ animal will theoretically have the highest possible positive values for all sub-indices, but breeding objectives should always be kept in mind! Highest is not always best.

% Components of the Nguni Cow Value and Nguni Growth Value

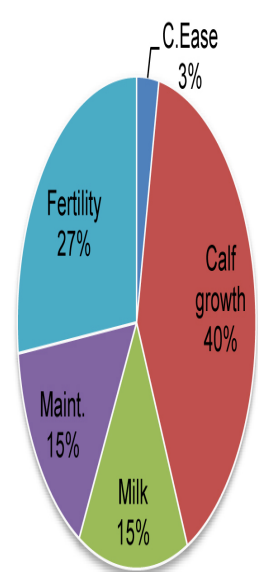

Sub value	EBV	+ or -	Cow Value	Growth Value
Calving Ease	Birth weight	-	2.5	2.5
	Birth maternal	-	0.5	0.5
Calf growth	Weaning weight	+	16	40
Milk	Milk	+	15	15
Maintenance	Mature wt ^{0.75} + 0.1 Milk	-	16	15
	AFC (age at first calving)	-	10	6
Fertility	ICP (intercalving Period)	-	20	10
	Herd Life (longevity)	+	20	11

Selection values are expressed around 100 (breed average for live animals). 50% of animals in the breed are average and have selection values between 90 and 120 (2.5 and 3 stars).
